

CLAUDBUTLER

Model 8965

Introduction

The new ARC dual suspension features triple butted 7005 seamless extruded ovalised alloy sections which are TIG welded into a 'Y' configuration and then reinforced with gussets at the critical stress points. The rear swingarm has a CNC yoke, oversized square section stays and forged dropouts with a replaceable gear hanger. The pivot is an oversized tubular bushing with CNC supports. The internal bushings are fully replaceable for long term serviceability. The whole design of the rear swing arm is to minimise flex and reduce side loading of the shock unit. The frame features multi position shock location holes and comes as standard with a Cane Creek AD5 shock unit to give 4½ inches of travel.
