ing doesn't just mean long travel anymore. Not since we've taken it to new extremes. Now it means no gravity, as in G-Zero. Our very successful cross-country models have been used as the basis for the new G-zero FX models. They have our optimized pivot location for effective climbing oversized (yet ultra-light) main frame with 110mm of travel. Excuse us if we're just a little proud to say that these are the lightest freeride frames in the industry. The G-Zero Enduros are the perfect dance partner when you need a lightweight, comfortable full suspension bike.

Pure freeriding, combined with unlimited speed: the new Octane has been developed to satisfy even most radical freeriders. The adjustable steering angle of our world cup racing bikes or the 3 travel options transform this revolutionary bike into a true downhill machine. The innovative construction of our Octane allows up to 160mm travel and together with an optimized pivot location it results in a moderate climbing performance.

FULL SUSPENSION
SERIE

Still an infant, already a superstar. Believe us, our Worldcup racers wouldn't ride these bikes in competition if they had any compromises or showed any weakness. Our team has spent countless hours honing the geometry to a scalpel-shape edge with the perfect balance and optimal ride tuning and now they are letting you in on the secret of their success. G-Zero full suspension cross-country bikes are for racers, iron men or just your above-average go-fast crazy. Lighter than it's FX brother the cross-country offers 85mm of balanced travel and steering precision with our optimized pivot location for efficient climbing and high-speed ground pounding.

RACING HARDTAILS

You are the man. You decide what you ride. You don't need to listen to "full suspension is the only way" experts. When you race you do it your way. Light, efficient and hardtail. Just the way YOU like it. Our updated Endorphin models are made with a new Thermobrid matrix that is lighter than ever before. We also left the nose of these heat-seeking missiles unpainted so you can see the beauty of the raw carbon structure.

RACING
SERIES

Speaking of raw, look at our beautiful, hand-made 7005 series aluminum race frames. We left the polished alloy exposed for that factory-racing look on the Team and Comp versions. And beauty isn't just skin deep. We've fully double butted and fine-tuned the details for even more lightweight performance. But you would settle nothing less: you are a hardtail rider.

It's true what they say about racing improving the breed. For 2000 we have taken our race-proven Biaxial tube set and placed it where the Sport rider lives. This tubing is torsionally stiffer and weighs less than ever. The double butted version is ultra light and all the details have been addressed for ultimate performance. Only 7005 alloy is good enough for these frame sets which are T4 or T6 double heat treated with external down tube gussets for long life and precise handling. Combine these sweet materials with the exclusive SCOTT race-bred geometry and ultra-plush suspension forks and you get maximum performance and comfort that will let you experience what mountain biking spirit is all about.

SOLUTION

The first rule in mountain bike performance is fit. If you don't fit on a "regular" frame. We've got the Solution. The Solution series offers a frame to perfectly fit smaller riders. But it's just smaller; it's proportionally adjusted to perfectly fit you. We did this without compromising geometry, in fact, performance is enhanced because you are more balanced on the bike. This is why we've added our Biaxial tubing for more torsional stiffness while maintaining a comfortable ride. In some models we double butted the tubes for even more weight savings. No matter which model you choose you can be sure that even though they might be smaller, they pack all the legendary SCOTT performance. Check out the specification chart and you'll see these bikes are big on the right components. You know what they say Good things come in small packages.

ADVENTURE

Why do you ride? Freedom? Exploration? Adventure? All of the above! The beauty of mountain bikes is that they are partners that can take you anywhere you dream to go. Over the next hill or around the world. Next stop Moab, no problem. You can't ask for a more willing partner than a SCOTT Adventure series bike. [That's how they got their name, after all.] This is mountain biking in its purest form. But since our product managers can't leave anything alone, this year we've added our race-proven Biaxial tubing. Biaxial tubing adds both performance and a race-ready fat tube look. So whenever you're ready, we've got your freedom machine.
